Response to Arguments

1. Applicant's arguments with respect to claims 1-33 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 23-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shaffer et al in view of Schmidt et al.

Regarding claims 23-25, Shaffer discloses (Abstract, Figs. 1-3, col. 1, line 10-67, col. 2, line 17-67, col. 3, line 40 thru col. 8, line 20) multiple networks wherein a gateway is used to coordinate communication between networks using/sharing multiple protocols (first/second protocol), and

Art Unit: 2667

gateway is used for protocol conversions, coordinate transmit/receive of data and monitoring data traffic. Shaffer is silent on communicating in a wireless environment. In analogous art, Schmidt (Abstract, col. 3, line 30 thru col. 6, line 46) discloses a wireless data system that includes communication between various computer systems that utilizes signal/protocol conversion. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to be motivated to implement communicating multiple protocols among devices in a wireless environment as taught by Schmidt with the teachings of Shaffer who implements protocol conversion in a multi-protocol, multi-device communicating environment for the purpose of utilizing communication benefits of RF communication.

Allowable Subject Matter

5. Claims 1, 3-13, 15,16 and 17-22 are allowed over prior art.

6. The following is a statement of reasons for the indication of allowable subject matter: Applicant has submitted a terminal disclaimer, which overcomes double patent rejection, and Applicant has canceled previously rejected claims 2, 14 and 26-33.

Although the cited art discloses multiple networks wherein a gateway is used to coordinate communication between networks using/sharing multiple protocols (first/second protocol), and gateway is used for protocol conversions, coordinate transmit/receive of data and monitoring data traffic, a wireless data system that includes communication between various computer systems that utilizes signal/protocol conversion they fail to teach/suggest controller selectively couples a first signal up conversion section to the joint signal transmit/receive section to perform transmit signals to network devices of a first wireless network, while keeping a second signal up conversion section decoupled from the joint signal transmit/receive section preventing signals from being transmitted to a second wireless network.
